

All your guests need
at half the budget, with twice the services.

One Cable. One Device. IPTV and Wireless Internet in a Box.

DEUROMEDIA
In-Room-Infotainment Solutions

MONEY TALKS - IPTV AND WIRELESS INTERNET IN A BOX

The international hotel guests' demand for international News and Sports Channels and a choice of TV Channels from their home country is still growing and expected to continue to do so in the future. At the same time wireless internet access for guest laptops is a must have service for any hotel. Deuromedia's "One Cable - One Device" Solution addresses these two fundamental needs in a highly economic way.

How can I find out more about the new opportunities?

Let us prove the economy of our solution to you and contact us today:

We are happy to bring you in contact with our local solution partner.

What kind of savings does the Deuromedia Solution provide for my hotel infrastructure?

The One Cable Solution allows you to operate all your in-room services through one cable, providing significant advantage compared to legacy systems that were dependent on separate cables for each service (TV, Radio, Internet, PBX, etc.)

The One Device Solution serves for both IPTV and Wireless Internet in a highly economic way. It literally cuts the necessary investment into a Set-Top-Box for IPTV and an Access Point for wireless internet into half. The hotel industries desire for an all-in-one digital solution at the pricing of an analog system has become reality.

How does Deuromedia's IPTV compare to legacy systems?

IPTV not only offers a rich bouquet of international TV channels, but supports both standard definition as well as the latest high definition and 3D TV channels.

Additionally, rich information for the Electronic Program Guide is available to serve your guests.

For perfect convenience, the navigation guides your guests through the selection of available TV channels either by country, language or main genre.

What about Radio Channels?

Of course a rich bouquet of international radio channels comes with the package.

Radio channels from the Internet are clearly on the rise and they are well supported.

Are internet based videos supported?

The One Device Solution fully supports Deuromedia's Rich Media Server providing a true web experience for your guests also on your TV sets.

The problem with services like YouTube or Hulu is that the laptop viewing experience isn't very impressive. By offering a true PC-like browsing experience via the TV set, that content is not only more convenient for a guest to access, but also presented in much higher quality.

For convenience, your guests can either use a simplified navigation with the TV remote control or a wireless keyboard for free navigation.

How about guest devices like iPod or iPhone?

The easy connection of guest devices to the TV set allows guests to access and use all devices in an intuitive way. There is a vast range of docking stations compatible with the Deuromedia Solution available, ranging from low cost to high end design devices.

What's different with the Deuromedia Internet Access Point for Laptops?

The One Device Solution provides outstanding availability for Wireless Internet for 100% of your rooms, no matter where the rooms are located or how thick your walls are.
